Mapco has submitted CP's to us & want us to review them in order to get

Carrie was thinking about calling them in this up.

Constituents of the listed waste that was disposed in pond: Below PQL (Is PQL high because of oily matrix)  
→ looking for other ways to find pond regulated (are sludges from API separator?)

\* Must remove to health based limits for all **UNLISTED** constituents

Sludges can be fed back into process.  
What do they want to do w/ sludges?

If Sludges are harmful → use mixture rule to require HWP disp  
If harmless, can send to SWLF.
